

Homework Assignment 2

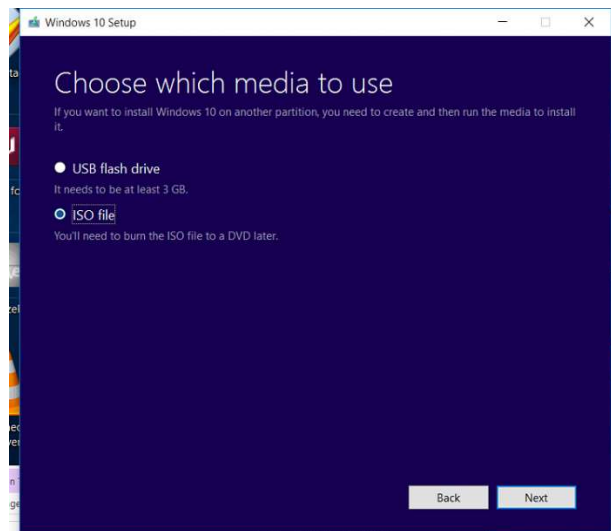

Instruction for installing **Windows 10**

Before everything you need to make sure that your computer meets minimum system requirements for installing such a operating system. You can simply check that by going to the microsoft website and look for system requirements for installing windows 10 or just click on this link: <https://www.microsoft.com/en-us/windows/windows-10-specifications>. When you're sure that your computer can run windows 10, these are the steps for installing, I will explain every single one.

1. You will need empty USB drive with minimum of 8GB memory.
2. Next step is to download Windows 10 Media Creation Tool
3. Now you have to create **bootable** USB drive using tool that you just downloaded.
4. Once you have bootable USB you are ready for installing windows 10 on your computer.
5. Make sure that you have created **backup** of your old files, so you avoid losing it.
6. Insert your USB drive and restart computer.
7. Click **DELETE** button several times until you enter into **BIOS(setup)**.

8. Under section “boot” look for boot devices or boot device priority, and for the first boot device choose your USB drive.
9. Click F10 and close BIOS, and setup will begin.

Creating bootable USB drive – download it from this link:
<https://www.microsoft.com/sr-latn-rs/software-download/windows10>.

Choose option number one (USB flash drive) and click next. In next window you should choose which USB drive you want, you have to choose the one that is empty. And then click start and wait for tool to finish the job.

Starting Windows 10 setup

With your bootable USB drive in place restart your computer and click DELETE button several times until you enter into BIOS.

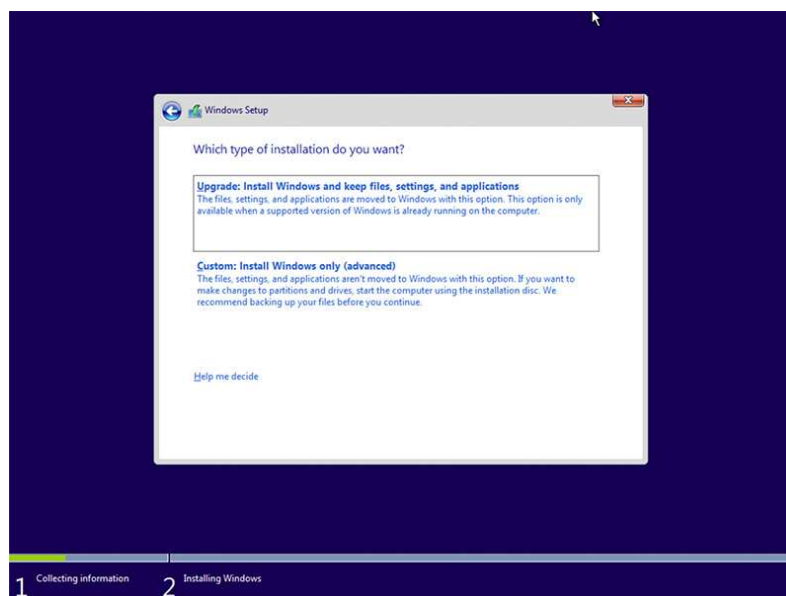

Under section **boot** look for boot options and choose your USB drive. Click on “save & exit” and your setup should automatically start.

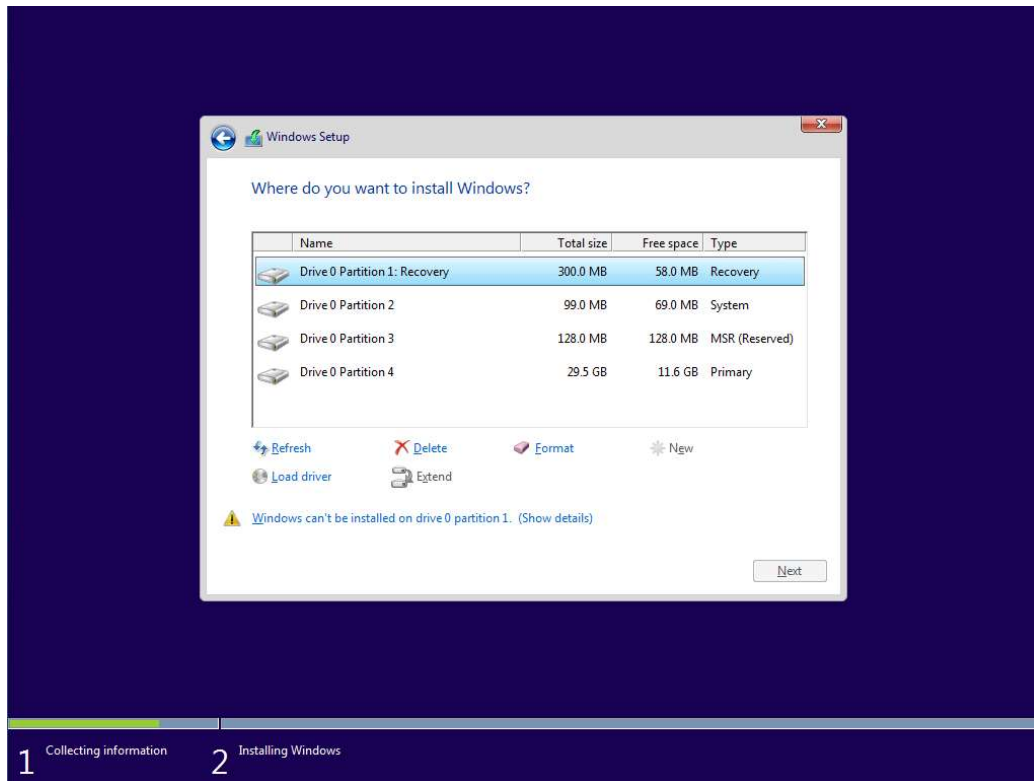

Installing Windows 10 operating system

Choose your language and click next. You will be asked which type of installation you want, you should click “custom”.

Now you have to choose on which drive to install operating system.

Make sure on which one the system is currently located, and choose that one. Click format and then apply. After that click next and you have started the setup. Sit back and relax while installation is in progress.

When the installation is finished you now have to setup your personal details and other options in windows. Give yourself time and carefully adjust system however you like.

Congratulations, you just installed operating system by yourself, I hope that this tutorial was helpful for you, and also I hope that you will enjoy using Windows 10.

May the odds be ever in your favor.
